

Plan:

ExpertSearch System - add a function on the page for user to type in a university website and it automatically crawls the faculty webpages on the given university website. Then searching should be able to show results of the faculty webpages crawled from the given university.

Completed tasks:

- Text classification function for faculty directory pages
- Text classification function for faculty webpage URLs

Pending tasks:

- Crawling function that leverages the Text classification
- Add user input UI that sends requests to server to trigger crawling
- Testing, improvement and demo

Challenges: None
